

Mobile Command Center

On Demand Mobile Network and Call Center Built for Rapid and Rugged Deployment

Mobile sub-stations along with mobile communications and continued SCADA control are key to every utility. The Mobile Command Center (MCC) from Encore Networks, in partnership with Connected Solutions Group (CSG), is a main component to achieve these important functions. It enables today's utilities to provide constant power, grid expansion, future growth, planned maintenance, temporary increases in sub-station capacity, to prepare for forced outages and immediate repairs due to weather and other outages.

The MCC is an all-in-one solution. The MCC is a rugged case designed to fit into overhead airline storage or any small space. It comes with two phone sets that are tied to your corporate numbers for emergency repair, network operations, site management and more. A hardened EN™ router from Encore Networks is included to provide mobile connectivity using Verizon nationwide LTE coverage along with support for both voice and sub-station PLC SCADA connectivity using either serial or Ethernet. Includes imbedded Wi-Fi for onsite "hot spot" of other personal devices, phones, tablets, and printers if needed. The MCC has an eight (8) hour battery for constant talk time before needing charging, or can be plugged into an external AC power source for continuous operation.
