# The enSite™ Premises-based Enterprise Management System

## Document Set

**Y**ou can track your EN™ devices (EN-400™, EN-1000™, EN-2000™, EN-3000™, and EN-4000™ routers) via Encore Network's enSite™ management system or via Encore Network's enCloud™ management system.

The enSite™ premises-based enterprise management system lets you manage your devices in a private or otherwise closed network. The enCloud™ cloud-based management system lets you manage your devices via the internet.

For the most part, enSite™ and enCloud™ function in identical ways. Most differences between enSite™ and enCloud™ concern system maintenance and similar functions. Differences are outlined in the document [Using the enSite™ Standalone Server](#).

### List of Documents

Set-up and maintenance of enSite™ are discussed in the documents listed below.

- [Using the enSite™ Standalone Server](#)
- [The enSite™ Backup Utility](#)
- [Troubleshooting the Server's Copy-Protection Key](#)

Development and use of accounts in enSite™ are identical to development and use of accounts in enCloud™. See the following modules and documents:

- [The QuickStart Guide for the enCloud™ and enSite™ Management Systems](#)
- [The enCloud™ Account Development Module](#)
- [The enCloud™ Routers and Rules Module](#)
- [Setting User Preferences in the enCloud™ and enSite™ Management Systems](#)

If you wish to use Encore Networks, Inc.'s cloud-based network, see the [Document Set for the enCloud™ Management System](#).
